# MILESTONE 4

Chetna Singhal, Abilash Vikram Gupta, Yeggi Lee

Brief write up that includes a description of the interesting thing you did and how it leveraged the OpenWeatherMap API. Include a screenshot of your Android app running.

For this project, the interesting thing we did was to fetch the weather condition in the form of an icon using the Picasso library. When the user presses the "Retrieve Weather" button, an icon and temp representing the current weather will show up on the screen. So essentially, the icon was fetched using the URL, "http://api.openweathermap.org/data/2.5/weather?q=Austin", from the OpenWeatherMap API and then the Picasso library was used to render the icon in our Android application using this template "Picasso.get().load(url).into(view);".

Android app - START Screen   Android App - FINAL Screen
